

“Complete wound support following thoracic surgery for all your patients. Improves patient comfort, pain management and speeds return to pre-op respiratory levels.”

Heart Hugger Sternum Support Harness has been improved to increase patient comfort and to reduce the need for re-adjustment. With the addition of the new, lower retention strap and wireless telemetry unit pouch, Heart Hugger maintains its fit to the patient, increasing the ease of use and giving your patients more control over their pain. As well our new Surgi-Support Vest for Women is used to promote healing while eliminating pulling and tugging on the
